1 Explanatory Notes

1.1 Cautionary Notes

The current release of the Demscore data is a beta version. The data is not yet complete and the data quality is not yet guaranteed. We are working on improving the data quality and are planning to do a full release later this year.

1.2 Demscore Background

Demscore provides worldwide free access to harmonized data on Democracy, Environment, Migration, Social Policy, Conflict and Representation from several of the world’s most prominent social science research institutes.

Demscore facilitates large-scale comparative analyses on the grand challenges of today’s societies, including those caused by population aging, rapidly changing migration patterns, increased social inequalities, accelerating globalization, recurrent financial crises, political deadlocks, violent conflict, and the rise of populism. The interdisciplinary nature of Demscore data is essential to advance adequate policy responses to such complex societal challenges facing Sweden, Europe, and the world today.

The Demscore consortium includes several national and internationally renowned databases of outmost importance for the scientific community when tackling complex societal challenges associated with the Sustainable Development Goals (SDGs) and beyond. The joint infrastructure ensures that data integrity and quality are at the highest international standards, and it maximizes usability in the measurement of contextual data with over 25,000 variables across nearly all countries in the world, from 1789 to the present.

It creates critical time- and cost saving advantages in data collection, management, distribution, and not the least for end-users in the scientific community. A fully normalized, joint PostgreSQL database, sophisticated programming, and a web-based interface make it possible to select a series of variables across all six Demscore databases, and get a custom-designed dataset and codebook generated automatically.

1.3 The Demscore Codebook

The autogenerated Demscore Codebook lists variable entries for those variables chosen by the user along with citation guidelines and license per variable.

The meta data is extracted from the codebooks per dataset stored in a table in The Demscore PostgreSQL database with one row per variable for all datasets. This table includes codebook entries, variable tags, labels and other variable information in LaTeX format used for the generating of an automated codebook.

For all meta data across all datasets, Demscore uses one set of standard entries that all members projects provided information on. In addition, variables from the different datasets have or require different sets of additional information as meta data specific to each dataset. These entries are also included, but as variable-specific meta data below the standard entries.

To avoid name clashes of variables and because variables entries have different naming schemes across datasets and projects, Demscore uses a hybrid form between original variable entries and new Demscore variable entries:

To begin with, all variable names in Demscore were cleaned in the beginning of the harmonization process. This cleaning included for instance that spaces or dots in the variable names were replaced with underscores and all letters were converted to lower case. The original tag is however still available and stored in the PostgreSQL table. Each variable in Demscore is available in a short- and long form. The short form is the cleaned name of the priginal variable tag, the long form begins with the name of the dataset from which it is retrieved, followed by the cleaned variable name.

For instance, the original name of the variable *MinisterPersonalID* from the H-DATA Foreign Minister Dataset is included as *ministerpersonalid* (short form) *hdata_fomin_ministerpersonalid* (long form) in Demscore.

In addition, each dataset includes Demscore unit-identifier variables which are named according to the following naming scheme: Beginning with `u_`, followed by the name of the primary unit and finally the variable tag. The *year-* variable from the COMPLAB SPIN The Out-of-Work Benefits Dataset (OUTWB), which is part of the primary unit `u_complab_country_year` has the Demscore unit identifier name *u_complab_country_year_year*.

1.4 Methodology

For details on our methodology please see the Demscore Methodology document which is included in the zip file retrieved from the download interface.

1.5 Download ID

The download ID allows the user to share the ID with other users for replication purposes. A user can type the download ID into the demscore website and retrieve the same download selection and files as the original user. This ID is autogenerated for each download from the demscore website.

2 REPDEM

The European Representative Democracy Data Archive (ERDDA) presents the comparative data collection efforts undertaken by various research and data infrastructure projects on political institutions, political parties, cabinets and governments in Europe. As a world-leading database for research on the competition for government in Europe, the archive contains unique data on governments, parliaments, political parties, length of government formation periods, bargain rounds, as well as procedures and mechanism for intra-coalition governance, etc.

The latest updates were made in the research infrastructure project Party Government in Europe Database (PAGED). PAGED builds on ERDDA's previous international and comparative projects on European parliamentary democracy.

More information is available on the project's website: <https://erdda.org/>

2.1 REPDEM PAGED Party Codes

Dataset tag: repdem_paged_pastr

Description: Party Government in Europe Database (PAGED) is a research infrastructure project that aims to build a state-of-the-art database for comparative coalition research on political institutions, political parties, parliaments and governments.

This comparative dataset combines the datasets that was collected for Coalition Governance in Central Eastern Europe (2020), edited by Torbjörn Bergman, Gabriella Ilonszki, and Wolfgang C. Müller, and Coalition Governance in Western Europe (2021), edited by Torbjörn Bergman, Hanna Bäck, and Johan Hellström.

All data were meticulously collected by experts on coalition politics in their respective country using standardized coding instructions and interview guidelines. Specifically, the data were gathered from official documents (government, administration, and parliament) and party documents (election manifestos, coalition agreements), by conducting semi-structured interviews with (former) staff and cabinet members as well as a systemic analysis of media reports.

The combined dataset provides detailed information on important aspects of government formation, coalition governance, and government termination in 10 Central Eastern European from their democratic transitions up to June 1st, 2014, as well as 16 West European countries and Croatia up to 31st December 2019.

2.1.5 Coalition Agreements and Conflict Management Mechanisms

Despite the purpose of Coalition Agreements being to avoid conflict, conflicts between coalition parties exist. The variables in this section describe which oversight mechanisms and conflict resolution arenas are included in the coalition agreements to further reduce the potential for inter-party conflict.

2.1.5.1 Coalition agreement (coal_agree)

Long tag: repdem_paged_paco_coal_agree

Original tag: coal_agree

Description:

- 0: N – No written coalition agreement
- 1: PRE – Pre-electoral written coalition agreement
- 2: POST – Post-electoral written coalition agreement
- 3: IE – Written coalition agreement in the case of coalitions formed during the parliamentary term (not immediately following elections)
- 4: PRE, POST – Pre- and post-electoral written coalition agreement

2.2 REPDEM PAGED Party Strings

Dataset tag: repdem_paged_pastr

Description: Party Government in Europe Database (PAGED) is a research infrastructure project that aims to build a state-of-the-art database for comparative coalition research on political institutions, political parties, parliaments and governments.

This comparative dataset combines the datasets that was collected for Coalition Governance in Central Eastern Europe (2020), edited by Torbjörn Bergman, Gabriella Ilonszki, and Wolfgang C. Müller, and Coalition Governance in Western Europe (2021), edited by Torbjörn Bergman, Hanna Bäck, and Johan Hellström.

All data were meticulously collected by experts on coalition politics in their respective country using standardized coding instructions and interview guidelines. Specifically, the data were gathered from official documents (government, administration, and parliament) and party documents (election manifestos, coalition agreements), by conducting semi-structured interviews with (former) staff and cabinet members as well as a systemic analysis of media reports.

The combined dataset provides detailed information on important aspects of government formation, coalition governance, and government termination in 10 Central Eastern European from their democratic transitions up to June 1st, 2014, as well as 16 West European countries and Croatia up to 31st December 2019.

2.2.5 Coalition Agreements and Conflict Management Mechanisms

Despite the purpose of Coalition Agreements being to avoid conflict, conflicts between coalition parties exist. The variables in this section describe which oversight mechanisms and conflict resolution arenas are included in the coalition agreements to further reduce the potential for inter-party conflict.

2.2.5.1 Coalition agreement (coal_agree)

Long tag: repdem_paged_pastr_coal_agree

Original tag: coal_agree

Description:

0: N – No written coalition agreement

1: PRE – Pre-electoral written coalition agreement

2: POST – Post-electoral written coalition agreement

3: IE – Written coalition agreement in the case of coalitions formed during the parliamentary term (not immediately following elections)

4: PRE, POST – Pre- and post-electoral written coalition agreement
